

The founding team you can place.

You back founders because the team is the bet. **Ceramic is a founding team you can place into the one portfolio company where a genuinely new AI capability is the bottleneck** — and hiring a product-and-engineering org to build it would cost quarters they don't have.

NOT FORWARD-DEPLOYED

The frontier labs will send a portfolio company forward-deployed engineers to make *their* platform stick. We're the opposite end of that spectrum.

- An engineer shipped in from a vendor → The whole founding team, embedded
- Lands a predetermined platform → Tech-agnostic — solves the real problem
- Scales on volume, hundreds of seats → Scarce & bespoke — 2–3 a year
- You're one account of many → Total ownership of the outcome

WHAT A FUND GETS

We embed a small, senior team into one company and become its product-and-engineering function for the engagement — greenfield AI and end-to-end software with elegant UX, owned end to end, not a platform we're paid to install.

Not a service for the portfolio — **privileged access to a scarce team for the one bet that most deserves it.**

SELECTED WORK

Arena

RAPID IDEATION → PRODUCTION

Embedded tech leads for a Manhattan AI client. Conceived, designed, and shipped four AI-powered apps on aggressive timelines.

React · Python · OpenAI · vision
· audio/video

Rendevu

PRACTICE INTELLIGENCE

A MedSpa platform built from the ground up — booking, documentation, photography, and care delivery unified into one elegant app.

Onsite discovery · end-to-end
product · UX

Alside

ONTOLOGY & DRP APP

Turned spreadsheets and legacy processes into real inventory intelligence — a custom ontology and single-source ordering for 124 branches.

Foundry OSDK · PySpark · Glaze UI
